

慶應言語学コロキウム

Do Binding and Scope Reconstruct?

講師：阿部 潤 氏（元東北学院大学文学部教授）

[日時] 2018年6月9日（土）・10日（日）13:00-18:30

[会場] 慶應義塾大学三田キャンパス北館3階大会議室

使用言語：日本語

*参加費無料・事前申込不要（会場にて参加者カードへの記入が必要となります）

In this talk, I argue that the copy theory of movement standardly assumed in the minimalist framework (cf. Chomsky 1993) is not empirically motivated by binding and scope reconstruction effects. I defend Cinque (1991), Cresti (1995) and Lechner (1998), among others, in their claim that binding reconstruction should be kept distinct from scope reconstruction. As for binding reconstruction, I argue for Abe's (2014) movement theory of anaphora, according to which an anaphoric relation is captured via Move and whether "binding reconstruction" takes place or not depends on whether a successful operation of Move is possible to establish a relevant anaphoric relation. As for scope reconstruction, I argue for a theory of the sort Cinque (1991) advocates, according to which the impossibility of scope reconstruction across an island, known as Longobardi's (1987) generalization, is attributed to the referentiality of a *wh*-phrase; that is, when a *wh*-phrase moves across an island, it must be taken as referential, hence taking the widest scope.

[スケジュール]

- First Day:
- 1) A Movement Theory of Anaphora and Reconstruction
 - 2) Interface Conditions on "Gaps"
 - 3) Against a Semantic Approach to Scope Reconstruction
 - 4) Reconstruction into Parasitic Gaps

- Second Day:
- 1) Reconstruction in *Tough*-Constructions
 - 2) Condition C Reconstruction in Japanese Scrambling
 - 3) How to Derive the Anti-C-Command Requirement on Argument Ellipsis
